Flu vaccine for the 2022-2023 flu season was pre-booked in February 2022.

There will be 6 different flu vaccine presentations; a majority of them are single-dose syringes as per VFC provider preference. Single dose syringes take up much more space than vials—please keep that in mind when placing orders. Please plan for your vaccine storage needs now.

The Immunization Program Office will open flu vaccine ordering when it has at least 25% of its annual allocation of flu doses available in the McKesson warehouse. Flu vaccine order sets in ASIIS will be edited as vaccine presentations are available. If you do not see your desired presentation in the order set, you can select a different presentation or wait until your preference becomes available (no guarantees of if/when presentations will become available). Similarly, when a presentation is no longer available, that presentation will be removed from the order set.

Watch ASIIS for the announcement that flu vaccine ordering is open.

The Immunization Program Office strongly encourages smaller, more frequent orders.

Flu doses must be received in ASIIS before they are administered to patients. Flu doses received should be administered and recorded in ASIIS ASAP. Orders for additional vaccine may be put on hold or denied if it appears that orders are not received in ASIIS. Orders for additional vaccine may be reduced or denied if it appears that previously delivered doses have yet to be administered. For example: if you received 100 doses and are placing a new order for 70 more doses and ASIIS shows that you have not administered more than half of the originally delivered doses, your order may be reduced/denied.

ASIIS information is the only information that the Immunization Program Office has available to make this determination.

You may administer COVID-19 and influenza vaccines without regard to timing (both live, attenuated, and non-live influenza vaccines). This includes administration of COVID-19 and influenza vaccines on the same day, as well as coadministration at any time interval.

With influenza season approaching, CDC recognizes there may be compelling logistical advantages to offering patients COVID-19 and influenza vaccines on the same day, and you may encourage patients to receive these on the same day. There are no safety concerns for coadministration.

Check ASIIS frequently. The Immunization Program Office provides regular updates and specific notices to providers in ASIIS.

For more information, please visit the CDC here.

For questions about flu vaccine ordering please contact the Immunization Program Office; Vaccine Center at:
Phone: 602-364-3642   Email: ArizonaVFC@azdhs.gov

Thank you for protecting Arizonans against flu and COVID-19.
2022 - 2023 PEDIATRIC INFLUENZA VACCINES

* Indicates this presentation is available to order through the Vaccines for Children (VFC) program.

6 Months & Older

- **Flucelvax® Quadrivalent**
  Seqirus USA, Inc
  0.5 mL single-dose syringe, 10 pack
  NDC 70461-0322-03

- **Flucelvax® Quadrivalent**
  Seqirus USA, Inc
  5 mL multi-dose vial, 10 doses
  NDC 70461-0422-10

- **Fluarix® Quadrivalent**
  GlaxoSmithKline Biologicals
  0.5 mL single-dose syringe, 10 pack
  NDC 58160-0890-52

- **Afluria® Quadrivalent**
  Seqirus USA, Inc
  5 mL multi-dose vial, 10 doses
  NDC 33332-0422-10

- **Fluzone® Quadrivalent**
  Sanofi Pasteur
  5 mL multi-dose vial, 10 doses
  NDC 49281-0637-15

- **Fluzone® Quadrivalent**
  Sanofi Pasteur
  0.5 mL single-dose vial, 10 pack
  NDC 49281-0422-10

- **Fluzone® Quadrivalent**
  Sanofi Pasteur
  0.5 mL single-dose syringe, 10 pack
  NDC 49281-0422-50

- **FluLaval® Quadrivalent**
  GlaxoSmithKline Biologics
  0.5 mL single-dose syringe, 10 pack
  NDC 19515-0808-52

* Indicates this presentation is available to order through the Vaccines for Children (VFC) program.
**2022 - 2023 PEDIATRIC INFLUENZA VACCINES**

* Indicates this presentation is available to order through the Vaccines for Children (VFC) program.

### 3 Years & Older

Afluria® Quadrivalent
Seqirus USA, Inc
0.5 mL single-dose syringe, 10 pack
NDC 33332-0322-03

### 2 to 49 Years

Flumist® Quadrivalent
AstraZeneca
0.2 mL single-dose sprayer, 10 pack
NDC 66019-0309-10
Guide for Determining the Number of Doses of Influenza Vaccine to Give to Children Age 6 Months Through 8 Years

Did the child receive at least 2 doses of trivalent or quadrivalent influenza vaccine* before July 1st, 2022?

NO
Give 2 doses of current year's influenza vaccine, spaced at least 4 weeks apart.

YES
Give 1 dose of current season's influenza vaccine.

*The two doses need not have been received during the same season or consecutive seasons.

Note: If an 8-year-old patient needs two (2) doses of influenza vaccine this season, they should receive two (2) doses even if they turn 9 years old before the second dose is administered.

Coadministration of COVID-19 and Influenza Vaccines

Providers can administer COVID-19 and influenza vaccines on the same day or coadminister at any time interval. There may be logistical advantages to administering COVID-19 and influenza vaccines on the same day, which providers may encourage to patients. There are no safety concerns for coadministration.

When deciding whether to coadminister another vaccine(s) with COVID-19 vaccine, consider:

- If the patient is behind OR if the patient is at risk of becoming behind on recommended vaccines
- The patient's risk of vaccine-preventable disease
- The reactogenicity profile of the vaccines
- The likelihood of avoiding a missed opportunity to vaccinate

Best practices for multiple injections include:

- Label each syringe with the name and the dosage (amount) of the vaccine, lot number, the initials of the preparer, and the exact beyond-use time, if applicable
- Separate injection sites by 1 inch or more, if possible
- Administer the COVID-19 vaccine and vaccines that may be more likely to cause a local reaction (i.e., tetanus-containing vaccines) in different limbs, if possible
