**AIPO VFC PEDIATRIC INFLUENZA VACCINE 2020-2021**

### 6–35 MONTHS OLD

- Afluria® Quadrivalent
  - Seqirus
  - 0.25 mL single-dose syringe, 10 pack
  - NDC 33332-0220-20

### 6 MONTHS & OLDER

- Fluarix® Quadrivalent
  - GlaxoSmithKline Biologicals
  - 0.5 mL single-dose syringe, 10 pack
  - NDC 58160-0885-52

- Fluzone® Quadrivalent
  - Sanofi Pasteur, Inc.
  - 0.5 mL single-dose syringe, 10 pack
  - NDC 49281-0420-50

- FluLaval® Quadrivalent
  - GlaxoSmithKline Biologicals
  - 0.5 mL single-dose syringe, 10 pack
  - NDC 19515-0816-52

### 4 YEARS & OLDER

- Flucelvax® Quadrivalent
  - Seqirus
  - 0.5 mL single-dose syringe, 10 pack
  - NDC 70461-0320-03

- FluMist® Quadrivalent
  - MedImmune / Astra Zeneca Vaccines, Inc.
  - 0.2 mL single-dose nasal sprayer, 10 pack
  - NDC 66019-0307-10

### 2–49 YEARS OLD & HEALTHY

- Fluarix® Quadrivalent
  - GlaxoSmithKline Biologicals
  - 0.5 mL single-dose syringe, 10 pack
  - NDC 58160-0885-52

- Fluzone® Quadrivalent
  - Sanofi Pasteur, Inc.
  - 0.5 mL single-dose vial, 10 pack
  - NDC 49281-0420-10

### Guide for Determining the Number of Doses of Influenza Vaccine to Give to Children Age 6 Months Through 8 Years

1. **Did the child receive at least 2 doses of trivalent or quadrivalent influenza vaccine before most recent July?**
   - **YES**
     - Give 1 dose of current season’s influenza vaccine.
   - **NO / DON’T KNOW**
     - Give 2 doses of current year’s influenza vaccine, spaced at least 4 weeks apart.

### Notes:

- The two doses need not have been received during the same season or consecutive seasons.

The two doses can both be inactivated influenza vaccine (IIV), or, for children age 2 through 8 years who have no contraindications to live attenuated influenza vaccine (LAIV), can both be LAIV, or alternatively, 1 dose of IIV and 1 dose of LAIV.

Administer a second dose to a 9-year-old child who received their first dose in the current season when they were age 8 years, if they haven’t or don’t know if they have received 2 doses in prior years.
